## Carbon Reduction Plan

Supplier name

B2Mobility GmbH (Subsidiary of BP p.l.c)

Publication date

1 October 2025

### Commitment to achieving net zero

BP p.l.c (“bp”)’s ambition is to be a net zero company by 2050 or sooner for Scope 1 and 2 emissions within bp’s operational control and this applies to the bp group as a whole. B2Mobility GmbH (Subsidiary of BP p.l.c) (“the Supplier”), as a wholly owned subsidiary of bp, contributes to bp’s efforts towards its net zero ambition and the associated carbon reduction projects, and intends to play its part in its achievement. bp’s plans, the associated 2025 targets and 2030 aims, and the progress being made against them, are published on the Group’s website as [Sustainability Report 2024](#). bp is a UK-based global group, so its net zero ambition is naturally global in scope. It follows that implementation in individual countries, and for individual subsidiaries, will vary as bp’s businesses around the world strive to take the decarbonisation opportunities available to them - although achievement of net zero for bp globally may well entail reaching net zero in the UK. Greenhouse gas (“GHG”) emissions data are reported at a Group level in bp’s annual sustainability report and are also in its [ESG Datasheet 2024](#). This reporting includes the in-scope GHG emissions of the Supplier, as well as including the in-scope GHG emissions occurring in the UK.

**Basis of CRP:** At this time, this global basis of reporting is considered the appropriate and practicable approach for bp, and accordingly the Supplier considers it to be a suitable basis for this CRP. The Supplier has therefore completed this document on the basis of bp’s global reported net zero ambition and targets and aims, and the associated data. Accordingly, that is the basis on which the Declaration below has been signed. Where the Supplier is aware that this approach departs from PPN 006 and the associated guidance and reporting standard for Carbon Reduction Plans, in the interest of transparency the Supplier has endeavoured to note below that this is the case.

### Baseline emissions footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

**Baseline year: 2019**

**Additional details relating to the baseline emissions calculations:**

Baseline emissions are based on the organisational structure in 2019, not updated to reflect 2024 structure.

Notes – these notes refer to the baseline year 2019 table and data as well as the 2024 table data presented below:

- Represents the in-scope GHG emissions for bp globally based on operational control boundary for Scopes 1 and 2 and equity boundary for Scope 3 rather than a single boundary.
- Includes emissions from carbon dioxide and methane only (Scope 1) and carbon dioxide only (Scope 3). bp does not collect and report emissions data for nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulphur hexafluoride as they are not material to bp’s operations.
- Scope 1 and 2 emissions have been reported and recorded broadly based on the GHG Protocol Corporate Standard and the IPIECA Petroleum Industry Guidelines for Reporting Greenhouse Gas Emissions 2nd Edition, May 2011. Scope 3 emissions are reported broadly in accordance with the GHG Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard and are for Category 11 (use of sold products) only. bp considers this the most material category of scope 3 emissions for bp.
- bp used GWPs from IPCC AR4 for 2019-2022 reporting and from IPCC AR5 for 2023 and 2024 reporting.
- bp’s scope 1 and 2 GHG emissions reporting is subject to a limited level of assurance in accordance with the International Standard for Assurance Engagements (“ISAE”) 3000 Revised. As noted above, GHG emissions figures are published at bp group level rather than UK level.
- bp updates (and publishes on bp.com) its disclosures annually after year end via its Annual Report, Sustainability Report and ESG datasheet, to provide an update on progress against its ambition, aims and targets but does not issue a review and update of its base carbon reduction plan within 6 months of year end.
- UK Government conversion factors may be used as well as other sources for conversion factors in bp’s scope 1, 2 and 3 reporting. Any resulting difference in emissions resulting from factor choices would not be expected to materially affect the figures reported.
- bp does not plan to adjust the 2019 baseline emissions for organisational or portfolio change in subsequent years. This is to allow a stable baseline against which to measure progress.
- bp publishes information on the net zero ambition and underpinning targets and aims on the sustainability pages of the global site at: [Getting to net zero | Sustainability | Home](#) rather than on a specific UK website.

**Baseline year emissions:<sup>a</sup>**

<b>Emissions</b>	<b>Total (tCO2e)</b>
<b>Scope 1</b>	49,200,000
<b>Scope 2</b>	5,200,000
<b>Scope 3 (included sources)</b>	361,000,000 (These emissions are equivalent to the

GHG Protocol, Scope 3, category 11, within the selected boundary of bp’s net share of upstream production of oil and gas.)<sup>b</sup>

When taking into consideration the guidance provided in the GHG Protocol Corporate Value Chain (Scope 3) Standard, bp has calculated and disclosed scope 3 category 11 emissions as category 11 is the most substantive category of Scope 3 for the oil and gas industry.

<b>Total emissions</b>	The sum of the 3 emissions figures set out above is 415,400,000 tCO <sub>2</sub> e. However, they cannot be straightforwardly aggregated due to the different organisational boundaries used for Scopes 1&2 (operational control) and Scope 3 (equity).
------------------------	---

### Current emissions reporting<sup>a</sup>

Reporting year: 2024	
Emissions	TOTAL (tCO <sub>2</sub> e)
Scope 1	32,800,000
Scope 2	800,000
Scope 3 (included sources)	321,900,000 (These emissions are equivalent to the GHG Protocol, Scope 3, category 11, within the selected boundary of bp’s net share of upstream production of oil and gas.) <sup>b</sup> When taking into consideration the guidance provided in the GHG Protocol Corporate Value Chain (Scope 3) Standard, bp has calculated and disclosed scope 3 category 11 emissions as category 11 is the most substantive category of Scope 3 for the oil and gas industry.
<b>Total emissions</b>	The sum of the 3 emissions figures set out above is 355,500,000 tCO <sub>2</sub> e. However, they cannot be straightforwardly aggregated due to the different organisational boundaries used for Scopes 1&2 (operational control) and Scope 3 (equity).

### Emissions reduction targets

We are aiming for a 45%-50% reduction in our scope 1 & 2 emissions over the next five year referenced against the 2019 baseline.

### Carbon reduction projects

#### Completed carbon reduction initiatives

bp has achieved a 20,800,000 tCO<sub>2</sub>e reduction in its operated scope 1 & 2 emissions by

2024, a 38% reduction against the 2019 baseline.

Full details of bp's progress since 2019 on emission reduction can be found in the annual sustainability report on pages 17-20 in the [bp-sustainability-report-2024.pdf](#)

**Future carbon reduction initiatives**

In the future we hope to implement further measures.

More on emission reduction can be found in the annual sustainability report on pages 17-20 in the [bp-sustainability-report-2024.pdf](#)

## Declaration and sign off

This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard<sup>13</sup> and uses the appropriate government emission conversion factors for greenhouse gas company reporting.<sup>14</sup>

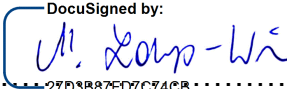

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements (where required), and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.<sup>15</sup>

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).
