

Louisiana

Louisiana is home to bpx energy's onshore natural gas business in the Haynesville Basin, located in the northwest part of the state. The state also serves as a major hub for transporting personnel and supplies to bp's offshore Gulf of America operations.

Across Louisiana, bp employs more than 880 people and supports more than 9,300 jobs.

Gateway to the Gulf

bp's net production was 346,000 barrels of oil equivalent per day (boe/d) in the Gulf of America in 2025.

With more than three decades of experience in the deepwater Gulf of America, we're our production capacity and preparing our next wave of growth in the region. We ranked second for offshore production in the region in 2025, and we're building capacity to produce more than 400,000 boe/d total by 2030, with major projects already underway.

Beyond existing assets, we're investing in a sixth Gulf of America hub, Kaskida, which will be our first step in unlocking 10 billion barrels of discovered resources in the Paleogene – an oil-rich geological area about 250 miles southwest of New Orleans. We expect Kaskida to have a production capacity of 80,000 barrels per day, with an anticipated start-up in 2029.

Onshore natural gas production

bpx energy, our US onshore oil and gas business, holds more than a half million acres in the Haynesville, where it has some of the deepest inventory in the basin and has seen substantial productivity gains over the past few years. bpx's acreage is well positioned to capitalize on the growth in US liquefied natural gas exports expected over the rest of the decade.

Supporting safe operations

bp's Houma Operations Learning Center helps train offshore employees and contractors for work in the Gulf of America. Nearby, bp uses a third party-owned heliport in Houma to move employees and contractors to and from their jobs in the Gulf of America by helicopter. bp's logistics base in Port Fourchon runs 24 hours a day, providing the supplies needed to keep our offshore Gulf of America facilities running safely and efficiently.
